MACHINE TEST (PROFILOMETER)

This is a standard apparatus used for assessing the riding quality of a road surface. The result of this apparatus is usually referred as International Roughness Index (IRI). The IRI is the summation of bumps and humps recorded by the Profilometer along a particular section of road.

Usually profilometer is used for newly Constructed Asphalt Road to check the Riding quality of that section. As per standard the IRI of new pavements should be within the range of 3M/KM

The following roads has been tested in the last three years (2022,23,24)

S.No	Name Roads	KM	Result Passing 3M/km	Remarks	Department
